

## **Engr 594: Approximate Methods of Engr Analysis II**

### [School of Engineering](#)

Application of approximate methods to solve boundary value and eigen-value problems; approximate analytical methods (series solutions); variational principles and numerical methods (finite difference, finite element, computer simulation).

3 Credits

### **Prerequisites**

- Pre-requisite: Math 353 or Graduate Standing

### **Instruction Type(s)**

- Lecture: Lecture for Engr 594

### **Subject Areas**

- [Engineering, General](#)
