

Engr 685: Mechanics of Composite Materials II

[School of Engineering](#)

Advanced techniques of modeling and analyzing the behavior and response of composite material systems. Nonlinear behavior, both constitutive and geometric. Emphasis on the use of finite element analysis, computational simulation.

3 Credits

Prerequisites

- [Engr 585: Mechanics of Composite Materials I](#) (Minimum grade: C)
- [Engr 590: Finite Element Analysis I](#) (Minimum grade: C)

Instruction Type(s)

- Lecture: Lecture for Engr 685

Subject Areas

- [Engineering, General](#)
- [Materials Science](#)
- [Mechanical Engineering](#)
