

## M E 533: Electronic Properties of Materials Mechanical Engineering

Theories of electron/atom interactions and electron transport are examined to explain the electronic properties of solids. Junctions, magnetic and optical properties are also discussed with special emphasis on semiconducting materials.

3. Credits

## **Prerequisites**

• Prerequiste: Junior standing (60 hr).

## **Cross-listed Courses**

• El E 533: Electronic Properties of Materials

## **Subject Areas**

- Mechanical Engineering
- Electrical and Electronics Engineering
- Materials Science
