

# Csci 387: Software Design and Development

## Computer & Information Science

Study of techniques for the construction of large, complex software systems, including project management, requirements analysis, specification, design, development, testing, documentation, deployment, and maintenance. Students develop software systems in a group structure that simulates an industrial setting.

3 Credits

### Prerequisites

- [Csci 223: Computer Org. & Assembly Language](#) (Minimum grade: C-)
- Prerequisite: Csci 211 (C-) OR CIS 211 (C-) OR Csci 356 (C-) OR CIS 356 (C-).

### Instruction Type(s)

- Lecture: Lecture for Csci 387

### Subject Areas

- [Computer Science](#)
