Emphasis - Physician Assistant Description

Physician assistants (PAs) provide health care services under the supervision of physicians. Although PAs work with the supervision by a physician, they may be the principal care providers in certain practices. In such cases, the PA confers with the supervising physician as needed or required by law. For information on a PAs scope of practice by state, visit the American Medical Association website. PAs are formally trained to provide diagnostic, therapeutic, and preventative health care services, as delegated by a physician. They take medical histories, examine and treat patients, order and interpret laboratory tests and X-rays, make diagnoses, and prescribe medications. PAs treat minor injuries by suturing, splinting, and casting. PAs also may prescribe medications in all 50 states.
